# Supplement for release 4.1

The support for applets in the browser will disappear. Therefore, all the applets have been removed from the website. The functions that previously used these are now HTML pages and an installable software program.

The program can be found on abelko.se

These changes mean that some parts of the manual does not comply with the web pages. Therefore, here are details on the parts that have been changed.

The functions available in the installable program are:
- Graphical programming
- Controller
- Script Editor
- Operator panel
- File Management

The parts of the manual that are affected are listed below:

Chapter 5.2
In the example in the chapter you should select Settings/Sensors & Actuators and go to Settings/Advanced /Channels to configure the channel.

Chapter 6.1
Open the installable program where the controller tool is included instead of going through the Settings/controllers.

Chapter 15.2
Instead of going through the Settings/Advanced/Graphic programming, you start the installed program and choose the graphical programming to run the utility.

Chapter 16.4
Instead of clicking on the file management under Settings/System, open the installed program and click the File tab.

Chapter 17.8
Launch the installed program instead of going through the Settings/Advanced/Menu operator panel.

Chapter 18.2
Launch the installed program to access the Script Editor instead of going through the Settings/Advanced/Scripts.
